

ENVIROPROCESS CONSULTANTS, INC. SIGNS OEM AGREEMENT WITH OSRAM SYLVANIA FOR GERMICIDAL ULTRAVIOLET LIGHTING PRODUCTS

Wilmington, MA (29 September 2020) – Today, OSRAM Sylvania Inc., division of OSRAM Licht AG ([FWB: OSR](#)), and [EnviroProcess Consultant, Inc.](#) established an OEM agreement for OSRAM to supply low-wavelength ultraviolet (UVC) lamps and electronics for the **EP Consultants Lo-UV™** disinfection product line.

According to Mr. Neeraj Chaudhary, Business Analyst at **EP Consultants**, this agreement will allow “acceleration of our production cycle to get air and surface disinfection products to the marketplace in this most critical time, particularly considering the extremely tight supply of quartz glass and UVC light bulbs.”

As Mr. Chaudhary has previously stated, the **EP Consultants Lo-UV™** line offers “affordable consumer and commercial products to accelerate the safe reopening of economies, while providing necessary peace of mind as people return to a state of normal in homes, offices, schools, retail and entertainment establishments, and transportation systems.”

The OEM agreement fits well within the product roll-out cycle for **EP Consultants**, which started with patent applications, lab research on real-world surfaces and UVC inactivation of SARS-CoV-2 (Covid-19) virions, and is now proceeding with a demonstration prototype.

In addition, **EP Consultants** has established NDA agreements with rapid manufacturing and distribution partners, such as [NeoTECH](#) as we explore long-term partnerships. For indoor air disinfection, **EP Consultants** has developed a proprietary dose relationship has been developed to correlate viral inactivation surface results to indoor air disinfection dose rates.

UV disinfection technology has been used for over 100 years in many applications including hospitals, laboratories, and water treatment facilities. **EP Consultants’** products are designed with a 100x safety margin for acceptable exposures as established by FCC for devices such as cell phones.

EP Consultants’ Lo-UV™ product line includes personal and installed devices to disinfect surfaces and air while people are present and conducting their normal activities, **without direct human exposure**. In addition to using a benign wavelength range and a >100x safety factor, the Lo-UV™ products include motion, body temperature, tilt, distance sensors, and algorithms including a mobile app to automatically control and monitor operation of the devices.

These inventions were designed in America and Mr. Anu Sood, Principal at **EP Consultants**, states “the products can easily be 100% manufactured in the United States.” **EP Consultants** continues to actively seeking business and governmental partners to continue research and development, create prototypes, secure international patents, and establish a manufacturing and distribution pipeline.

EP Consultants is a broad-based environmental research and consulting company, with over 30 years of experience with air quality, disinfection and pollution control, transport/fate analysis, and environmental risk assessment. Our clients include Continental Airlines, US naval bases, Los Alamos National Lab, Santa Fe Railway, Huntsman Corporation, Clean Harbors, Los Angeles USD, and small businesses such as dry cleaners, foundries, and aerospace parts manufacturers.

Upon the advent of Covid-19, **EP Consultants** formulated a proprietary system with UVC lights to disinfect public spaces including the air people breathe and surfaces that they touch. We quickly assembled a team from MIT, Boston University, and Caltech to determine the unique UVC light wavelengths that are most effective at pathogen disinfection while maximizing public safety. Selected medical, photonics, and engineering experts were tapped to incorporate novel features to ensure safety and effectiveness for our **Lo-UV™** product line.

To assure the highest quality for the **Lo-UV™** product line, we retained a team of intellectual property experts to craft and submit utility patent applications based on the **EP Consultants** product configurations, complete with operational parameters, sensors and algorithms, and a mobile app to operate and maintain the **Lo-UV™** products.

Key members of our **Lo-UV™** project team:

Name/Project Role	Affiliation	Education	Notes
Anu Sood Project Manager	Principal, EP Consultants	MIT – MS, BS	Professional Engineer, primary inventor.
Anthony Griffiths Lead Researcher	Associate Professor, Boston University	Univ of Cambridge – PhD Univ of Reading - BS	School of Medicine.
Lev Bromberg Research Advisor	Research Scientist, MIT	Moscow State Univ – PhD	Professor T. Alan Hatton Group (chemical engineering).
Neeraj Chaudhary Business Analyst	Associate, EP Consultants	UC Berkeley - BA	Co-inventor.
Danish Khatri Lead Engineer	Principal Engineer, Semiconductors	MIT – ME, BS	Electrical engineer.
Sandy Seth Lead Counsel	Principal, Sethlaw PLLC	Univ of Houston - JD UT Austin - BS	General counsel.
Roy Sharma QA Engineer	Systems Engineer, Boeing	Loyola Marymount University – MS, MBA	Testing and verification of safety and effectiveness.
Kevin Hickerson Photonics Consultant	Physicist, Earthineering Co.	Caltech – PhD, MS, BS	Validation of lamp irradiance for lab research and prototyping.
John Holcomb Former Senior IP Advisor	Partner, Greenberg Gross LLP *	Harvard - JD, MBA MIT - BS	* Former affiliation.
